Report Overview

There are many sources of titanium scrap. For example, the titanium scrap produced during the production of sponge titanium, whose upper skin, bottom and sides are contaminated by iron, chlorine, oxygen, nitrogen, and other impurities that do not meet product quality standards, must be disposed of and recycled. In addition, there are also titanium scrap produced during the process of titanium ingot casting, and titanium scrap produced by processing titanium material into titanium products, which are all important sources. Due to a large amount of titanium scrap, comprehensive utilization is promising.
