Abstracts

Recycled Foam Glass Aggregate is a foam glass gravel made from 100% recycled glass, also a lightweight, insulating and load-bearing material that can be used to create a sub-base for thermal insulation and free drainage, also contributes to a comfortable interior environment. Some of the market drivers for recycled foam glass aggregate are the increasing demand for eco-friendly and sustainable building materials, the need for effective stormwater management and flood control, the benefits of natural water filtration and recharge, and the government initiatives and regulations for green building. Some of the constraints of recycled foam glass aggregate are the higher initial cost and maintenance compared to conventional pavements, the lower durability and strength under heavy traffic loads and speeds, the seasonal effects and clogging of pores due to sedimentation and debris, and the potential leaching of pollutants from the pavement materials. Some of the future opportunities for recycled foam glass aggregate are the development of new and improved products with higher performance and quality, the application of innovative technologies such as smart sensors and IoT for monitoring and control, the expansion of new markets such as green roofs and terraces, and the creation of value-added services such as carbon credits and stormwater fees.

The global Recycled Foam Glass Aggregate market size was estimated at USD 684.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
