The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Recycled Fully Drawn Yarn competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Recycled Fully Drawn Yarn (FDY) is a type of polyester yarn that is made from discarded polyester products (such as waste PET bottles and polyester textiles) after consumption. It is processed by physical or chemical methods to produce recycled polyester chips, and then produced through processes such as melt spinning and high-speed stretching. Its fiber structure and properties are highly similar to those of native FDY (Fully Drawn Yarn), with excellent strength, uniformity, and dyeing performance. It is widely used in clothing, home textiles, industrial textiles, and other fields. It is a key product for achieving efficient recycling of polyester resources in the context of circular economy.

The global Recycled Fully Drawn Yarn market size was estimated at USD 488.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
