Abstracts

Recycled glass aggregates are crushed and processed glass materials derived from post-consumer or post-industrial waste streams, such as bottles, jars, and other glass products, which are cleaned, sorted by color (or left mixed), and mechanically crushed or milled to specific particle sizes suitable for use as a substitute for traditional mineral aggregates like sand, gravel, or crushed stone in construction and industrial applications. These aggregates are valued for their environmental benefits, including waste diversion from landfills, reduced resource extraction, and lower carbon footprint compared to virgin materials, while offering comparable physical properties such as durability, drainage, and load-bearing capacity in uses like road base, drainage media, concrete and asphalt additives, landscaping, and filtration systems.

The global Recycled Glass Aggregates market size was estimated at USD 485.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
