## Abstracts

The market for recycled ocean plastic encompasses the collection, processing, and transformation of plastic waste retrieved from marine and coastal environments into new products or materials, addressing both environmental concerns and consumer demand for sustainable alternatives. This market operates within the broader circular economy framework, focusing on diverting plastic pollution from oceans and waterways, thereby reducing ecological harm while creating value from waste. Key activities include the retrieval of discarded fishing gear, plastic bottles, packaging, and other debris; sorting and cleaning to remove contaminants; mechanical or chemical recycling to produce pellets, flakes, or fibers; and the subsequent manufacturing of goods ranging from apparel and footwear to packaging, construction materials, and consumer durables. The market is driven by growing regulatory pressure to reduce plastic pollution, corporate sustainability commitments, increasing consumer awareness, and advancements in recycling technologies that improve the quality and applicability of recycled content. Challenges include the high cost of collection and processing, variability in plastic composition and degradation, contamination issues, and the need for scalable infrastructure and consistent supply chains. Despite these hurdles, the market is expanding as brands integrate ocean plastic into their products to meet environmental goals and differentiate themselves in increasingly eco-conscious markets.

The global Recycled Ocean Plastic market size was estimated at USD 825.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.25% during the forecast period.
