Abstracts

Recycled plastic tiles are construction materials manufactured primarily from post-consumer or post-industrial plastic waste, such as PET bottles, polypropylene, or polyethylene, which are processed through methods like extrusion, compression molding, or injection molding to form durable, interlocking, or traditional-style tiles used for roofing, flooring, wall cladding, or outdoor paving applications; these products are designed to offer an eco-friendly alternative to conventional tiles by reducing plastic pollution, conserving natural resources, and often providing additional benefits such as lightweight properties, resistance to moisture, UV stability, and ease of installation, while aligning with circular economy principles and sustainability goals in the building and construction sector.
