## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Recycled Polyamide Yarn competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Recycled Polyamide Yarn production reached approximately 120 K tons, with an average global market price of around US\$ 4200 per ton. Recycled Polyamide Yarn is a type of textile yarn that is spun from recycled polyamide (PA) polymers. Polyamide, more commonly known as nylon, is a synthetic polymer found in a wide range of products, including fishing nets, carpets, and industrial waste. The recycling process involves collecting and purifying this waste, which is then melted down and extruded into new, high-quality filaments. These filaments are then spun into yarn. The use of recycled polyamide yarn significantly reduces the demand for virgin nylon, which is derived from petroleum. This helps to conserve fossil fuels, lower energy consumption, and decrease greenhouse gas emissions associated with the production of new synthetic fibers, making it a key material in the sustainable fashion and textile industries.

The global Recycled Polyamide Yarn market size was estimated at USD 504.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the forecast period.
