## Abstracts

Recycled polyester threads are fibers made from recycled plastic materials, primarily PET (polyethylene terephthalate) from sources like plastic bottles. By collecting, cleaning, and breaking down these plastics, manufacturers can convert the waste into new polyester fibers, which are then spun into threads. This process reduces the need for virgin polyester, a petroleum-based material, thus conserving resources and minimizing the environmental impact associated with plastic waste. Recycled polyester threads are widely used in textiles, apparel, and accessories, offering durability, strength, and performance comparable to traditional polyester, while supporting more sustainable practices.

The global Recycled Polyester Threads market size was estimated at USD 147.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
