Report Overview

Rubber has been recycled for about a century, but the market has greatly expanded in the past two decades. Most recycled rubber comes from the reuse of rubber tires, which has significant benefits to the environment and the public. Recycled rubber is produced from replaced tires through a straightforward process. Materials like fiber and wire are moved and the rubber is cleaned, and then the rubber is typically ground into what is called crumb rubber. The non-rubber portions of the tire are also recycled. At no point in the process does the rubber undergo any chemical change. In short, recycled rubber is rubber. The recycled rubber can then be used for a wide variety of applications, including roads, play-surfaces, hospital floors, and even shoes.
