Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Recycled Steel Cord Fibres competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Recycled Steel Cord Fibres are high-tensile steel filaments reclaimed primarily from waste or end-of-life tires, especially from the steel cord reinforcements within tire carcasses. After mechanical or chemical treatment, these fibres are cleaned, cut, and processed into usable lengths, typically ranging from 20 mm to 60 mm. They are widely employed as reinforcement materials in concrete and shotcrete, offering enhanced crack resistance, tensile strength, and durability. Recycling these fibres supports sustainability by reducing waste and the need for virgin steel materials.

The global Recycled Steel Cord Fibres market size was estimated at USD 319.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
