Abstracts

Recycling of kitchen waste grease refers to the collection, treatment, and reuse of discarded edible oils and fats generated by the food service industry, food processing enterprises, and household kitchens. These waste oils, including gutter oil, used cooking oil, and animal fats, can cause environmental pollution if discharged improperly and may enter the illegal food supply chain, posing risks to human health. Through professional recycling and processing, waste grease can be converted into biodiesel, industrial lubricants, soap, chemical raw materials, and other useful products. This process promotes resource utilization, reduces dependence on fossil fuels, and minimizes environmental pollution. Many countries have established strict regulatory frameworks to ensure the legal recycling and sustainable use of kitchen waste grease.

The global Recycling Of Cooking Oil And Grease market size was estimated at USD 13250.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 17.40% during the forecast period.
