## Abstracts

Red meat grading and classification system is a system used for quality assessment, grading, and classification of red meat (such as beef and lamb). This system employs a series of standardized testing methods and evaluation indicators to comprehensively assess various aspects of red meat, including appearance, meat quality, taste, and nutritional content, to determine its quality grade and classification. In grading, the system categorizes red meat into different quality levels, such as superior, excellent, and good, based on factors such as lean meat percentage, fat distribution, and muscle texture. These levels reflect the taste, nutritional value, and market value of red meat, aiding consumers in making more informed purchasing decisions. In classification, the system divides red meat into different categories based on factors such as species, cut, and intended use, such as beef being divided into brisket, steak, and beef slices, and lamb being divided into leg, rack, and lamb rolls. These classifications help enterprises better manage inventory, formulate sales strategies, and meet consumer demands. This system is widely used in meat processing, sales, and consumption fields, providing strong support for the standardization, regulation, and marketization of red meat quality.

The global Red Meat Grading and Classification System market size was estimated at USD 1260.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
