Abstracts

Red Teaming as a Service (RTaaS) is a professional cybersecurity offering in which an external team of ethical hackers simulates realistic cyberattacks on an organization's systems, infrastructure, or personnel to assess its security posture, response capabilities, and resilience. Unlike traditional vulnerability assessments or penetration testing, red teaming focuses on mimicking advanced persistent threats (APTs), combining technical intrusion techniques with social engineering and physical infiltration where applicable. Delivered as a managed service, RTaaS allows organizations to continuously evaluate and improve their detection, prevention, and incident response strategies without maintaining a full-time red team in-house. The service is highly customizable and often includes planning, attack execution, real-time monitoring, and detailed post-engagement reporting with actionable remediation steps. RTaaS is increasingly adopted in sectors such as finance, defense, healthcare, and critical infrastructure to strengthen security against sophisticated threats and meet compliance or regulatory requirements.

The global Red Teaming as a Service market size was estimated at USD 1838.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.80% during the forecast period.
