### Report Overview

Wine is one of the most popular alcoholic beverages which is prepared by the fermentation of grape juice. Red wine is made up of the black varieties of grapes that are highly pigmented and are rich in anthocyanin and tannins. Aging of the fermented wines gives the wine their unique color which varies from brick red (for mature wine) to darker brown for older wines. Red wines are stored in barrels for aging and to further increase the alcohol content to the desired level. Red wines are found to be rich in antioxidants which adds to the health benefits obtained from red wines when consumed in the right amount.

The global red wine market is segmented into North America, Europe, Asia Pacific, and the rest of the world (RoW). Europe is dominating the red wine market followed by North America. The U.S. in the North American region is experiencing a high demand for red wine owing to the shift in consumers' alcohol consumption preference and high inclination towards meeting the social dynamics.

Asia Pacific is the fastest growing region for the red wine market owing to improved disposable income and rising demand for alcoholic beverages from the emerging markets of India and China.
