Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Reef Safe Sunscreen competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Reef safe sunscreen is a type of sunscreen formulated to minimize harm to coral reefs and other marine ecosystems. Unlike traditional sunscreens, it avoids key ingredients such as oxybenzone and octinoxate, which have been shown to be toxic to coral reefs. These harmful chemicals can disrupt coral reproduction, cause coral bleaching, and harm other marine organisms. Reef safe sunscreens rely on alternative, environmentally - friendly active ingredients like zinc oxide or titanium dioxide, which work by physically blocking the sun's UV rays. They are designed to provide effective sun protection for the skin while also being safe for the delicate and vital coral reef ecosystems that are crucial for marine biodiversity.
