Report Overview

Refillable lighters are lighters that can be refilled with a flammable fuel, such as butane gas or liquid naphtha, when the original fuel runs out. They are different from disposable lighters, which are designed to be used only once and discarded. Refillable lighters typically consist of a metal or plastic container that holds the fuel, a valve that controls the flow of fuel, a spark wheel or an electric arc that ignites the fuel, and a flame adjustment mechanism that regulates the size and intensity of the flame. According to the U.S. Department of Transportation, a refillable lighter is defined as “a flame producing device that: (1) Is designed to be refilled by the consumer with a liquid or gaseous fuel; (2) employs an ignition mechanism; and (3) has a means of controlling or extinguishing the flame”.
