Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Refined Iodine competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global refined iodine production reached approximately 31 K tons, with an average global market price of around US\$ 66/kg. Refined iodine is high-purity elemental iodine (I₂) produced by purifying crude iodine sourced from caliche ores in Chile and iodine-rich brines associated with oil/gas fields. Typical downstreams are X-ray contrast media, pharmaceuticals, LCD polarizer production, iodophors/biocides and animal nutrition. Supply is concentrated in Chile, Japan, U.S.; a single brine plant addition in the U.S. typically contributes ~100-150 t/y. The industry's gross profit margin is significantly affected by integration and price cycles, and is mostly between 15% and 35%. Demand is anchored in medical imaging, pharmaceuticals and hygiene applications, where substitutability is low; LCD polarizers face technology shifts but remain resilient in existing lines. Feed and disinfectant uses provide a stable base, yielding low price-elasticity and high requirements for quality consistency. On the supply side, concentration in Chilean caliche and Japanese/U.S. brines means geology, energy and water conditions shape capacity additions, which are typically incremental, keeping the market structurally tight. Pricing blends term contracts with a volatile spot component; when contrast media and electronics-oriented grades strengthen simultaneously, the price center tends to rise. Profit pools are uneven between upstream iodine and downstream derivatives; integration and customer mix stabilize margins. Looking ahead, steady expansion in healthcare should continue to lift demand, while supply additions remain incremental due to permitting, energy and resource constraints, leaving periodic mismatches possible. For end-users, diversifying sources across regions, embedding indexed pricing, and maintaining prudent safety stocks are

key to navigating the cycle.

The global Refined Iodine market size was estimated at USD 2063.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.70% during the forecast period.
