Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Refined L-Base competitive dynamics, regional economic interdependencies, and supply chain reconfigurations.Refined L-Base, chemically named D-(-)-threo-2-amino-1-(4-nitrophenyl)-1,3-propanediol, also known as Chloramphenicol base, Levoamine, and chloramphenicol impurity, are chiral diolamine compounds. They are commonly found as white to pale yellow crystalline powders and are primarily used as upstream intermediates for chloramphenicol and its esters/salts (such as palmitate and sodium succinate). They are also used as pharmacopoeia impurity reference standards/research reagents. In 2024, global production of Refined L-Base reached 877.24 tons, with an average selling price of 67.8 US$ /kg. The upstream of this product includes p-nitroacetophenone, nitro-?-acetamido-?-hydroxyacetophenone, etc.; the core production process involves steps such as reduction-hydrolysis-resolution/crystallization; and the downstream involves the synthesis of chloramphenicol API and its derivatives as well as impurity/quality control.Refined L-Base is a niche pharmaceutical intermediate whose demand is almost entirely tied to chloramphenicol APIs and derivatives. Given restricted systemic use in many countries and stringent controls in the food chain, end-use demand is modest and relatively stable, with China-centric supply and geographically dispersed formulation markets. Supply is dominated by small to mid-size fine chemical manufacturers in China, complemented by reagent/impurity-standard vendors in Japan, the US and Europe. Pricing varies widely by purity, impurity profile and compliance, with project-based custom manufacturing common.

The global Refined L-Base market size was estimated at USD 59.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.10% during the
