Abstracts

Refinery grade propylene (RGP) is a light olefin hydrocarbon stream obtained as a byproduct of fluid catalytic cracking (FCC) units in petroleum refineries, characterized by a propylene content typically ranging between 50?70%, with the remainder consisting of propane and other light hydrocarbons; unlike chemical or polymer grade propylene, it is not subjected to intensive purification processes such as distillation or extraction, making it suitable primarily for alkylation, as a fuel gas blend component, or for further upgrading in propane dehydrogenation (PDH) units rather than direct use in polypropylene or other high-purity chemical syntheses.

The global Refinery Grade Propylene market size was estimated at USD 43600.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
