Report Overview

Reflectarray antenna is a large antenna system composed of several small antennas, which are arranged into an 'array' according to a specific geometric shape. This antenna works by space feeding. Its core is to shift the phase of the incident wave scattering by adjusting the resonant unit on the dielectric plate, so that the reflected wave can be in phase in the desired direction, forming a highly directional pencil beam. Reflectarray antennas combine the advantages of parabolic antennas and microstrip reflectarray antennas and are widely used in communication systems.
