## Abstracts

Reflective displays, also known as electronic paper displays (EPD) or e-paper displays. Reflective displays provide several advantages to emissive displays, and present a softer, more natural aesthetic to the viewer. At present, large area outdoor digital displays are almost exclusively made from LED arrays, as they are bright enough to be seen clearly in direct sunlight. In contrast, image brightness from reflective displays are proportional to the light intensity shining on them, utilizing very little energy in direct sunlight?this means zero light pollution is emitted in the daytime or at night.

The global Reflective Displays market size was estimated at USD 1805.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 13.10% during the forecast period.
