Abstracts

Reflective LCD digital signage utilizes reflective LCD panels, which differ from traditional backlit LCDs. Instead of using an internal light source (backlight) to illuminate the display, reflective LCDs use ambient light. A reflective layer behind the liquid crystal layer reflects external light, making the display visible. This technology can also incorporate color filters to display color images, albeit with less vibrancy than emissive displays.

The global Reflective LCD Digital Signage market size was estimated at USD 123.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.30% during the forecast period.
