Abstracts

Refrigerant Grade Propane is an organic compound with the chemical formula $\text{CH}_3\text{CH}_2\text{CH}_3$. This colorless, odorless gas is slightly soluble in water, but soluble in ethanol and ether. It has stable chemical properties and is not prone to chemical reactions, so it has excellent thermal properties and is cheap. In addition, Refrigerant Grade Propane has good compatibility with ordinary lubricants and mechanical structural materials. The ODP is 0 and the GWP is very small. It does not require synthesis and will not change the content of natural hydrocarbons. It has no direct impact on the greenhouse effect. With the increasing awareness of environmental protection and the continuous advancement of refrigeration technology, the demand for environmentally friendly refrigerants such as Refrigerant Grade Propane is expected to continue to grow. Currently, the refrigerant industry is in a period of transformation. As the environmental problems caused by fluorinated refrigerants such as Freon gradually emerge, more environmentally friendly and efficient refrigerants are gradually becoming mainstream.
