## Abstracts

The refrigerant handheld laser welder is a high-precision welding device specially used for the connection and maintenance of refrigerant pipes. It is usually used in the manufacturing and maintenance of equipment such as air conditioners, refrigerators, and refrigeration systems. This welder uses laser as a heat source. By focusing a high-energy laser beam, the metal material is locally heated to the melting point and precise welding is achieved. Compared with traditional welding methods, the refrigerant handheld laser welder has higher welding accuracy and a smaller heat-affected zone, which can effectively avoid thermal damage to surrounding materials and improve welding quality and efficiency. In addition, due to its handheld design, the operation is more flexible and suitable for operations in small spaces and complex environments, greatly improving the convenience and safety of work.

The global Refrigerant Handheld Laser Welder market size was estimated at USD 510.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.00% during the forecast period.
