Report Overview

A refrigerant liquid pump is a mechanical device used in refrigeration systems to circulate a refrigerant liquid through a closed loop. This pump helps to move the refrigerant from the evaporator to the condenser by increasing the pressure of the liquid. The pump is usually located near the evaporator, which is where the refrigerant absorbs heat and changes phase from a liquid to a gas. The pump then forces the liquid refrigerant through the condenser, where it gives off heat and changes back into a liquid, completing the cycle. Overall, the refrigerant liquid pump is an essential component in refrigeration systems, helping to maintain efficient cooling performance.
