Report Overview:

Refrigerated Gas Carriers are designed to transport cargo at approximately atmospheric pressure and are generally designed to transport large quantities of liquefied petroleum gas and ammonia. Refrigerated Gas Carriers can be divided into semi-refrigerated gas carriers and fully refrigerated gas carriers according to the degree of freezing. Semi-refrigerated gas carriers are increasingly becoming the best way to transport a wide range of gases, from LPG and VCM to propylene and butadiene. Semi-refrigerated gas carriers are most popular among operators of "small" gas carriers.

The most widely used arrangement for fully refrigerated gas carriers is an independent tank with a single side hull. A fully refrigerated gas carrier requires a complete secondary barrier and the cargo hold space must be inerted when carrying flammable cargo.

The Global Refrigerated Gas Carriers Market Size was estimated at USD 721.49 million in 2023 and is projected to reach USD 939.57 million by 2029, exhibiting a CAGR of 4.50% during the forecast period.
