## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Refrigerator Slides competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global refrigerator slide production reached 138.08 million sets, with an average selling price of US\$2.62 per set and a gross profit margin of 23.53%-30.18%. Companies are expected to have an annual production capacity of 17.7275 million sets. The main processes for precision slide production include automated rolling, stamping, surface treatment, and assembly. Upstream raw materials primarily include sheet metal, plastic components, and hardware accessories. Sheet metal primarily includes galvanized sheet, cold-rolled sheet, and stainless steel. Market supply is plentiful, and prices are primarily influenced by fluctuations in metal commodity prices. Downstream customers include Haier, Midea, Hisense, Meiling, BSH, Electrolux, and Panasonic. Upgrading consumer spending patterns are driving growth in the high-end refrigerator market. Precision slides are primarily used in large-volume, multi-temperature-zone, and relatively high-priced high-end refrigerators. The larger the refrigerator's volume and the more temperature zones, the more slides and other connectors are used in a single unit.

The global Refrigerator Slides market size was estimated at USD 362.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.40% during the forecast period.
