Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Refurbished Camera competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Refurbished Camera refers to a camera that has been inspected, repaired, cleaned and repackaged by an official or professional organization before being sold again. Such cameras may be returned items, display units, slightly faulty repair units or second-hand recycled units. After rigorous processing, they are in a state close to new and are sold at a lower price. The global second-hand and refurbished electronic product market is growing rapidly. As a high-priced product, the demand for refurbishment of cameras has increased accordingly. Professional photography enthusiasts, entry-level users and content creators drive demand, especially the refurbishment market for high-end models such as full-frame and micro-single cameras is active. Mainstream manufacturers such as Canon, Nikon and Sony have launched official refurbishment programs, providing warranty and certification services to enhance consumer trust. The price of official refurbished cameras is usually 20%-40% lower than that of new products, and they have undergone rigorous testing and accessories updates, and are close to the quality of new products. The rapid iteration of camera technology (such as mirrorless cameras replacing SLRs) has led to a large number of old models flowing into the refurbishment market, providing consumers with cost-effective options. During the refurbishment process, the firmware may be upgraded or some components may be replaced (such as sensor cleaning and battery replacement) to improve performance. Policies in the European Union, Japan and other places encourage the recycling of electronic products and reduce electronic waste. Refurbished cameras are in line with the trend of sustainable development and attract consumers with strong environmental awareness. Some brands recycle old cameras

through "trade-in" and resell them after refurbishment, forming a closed-loop business model.

The global Refurbished Camera market size was estimated at USD 3344.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.90% during the forecast period.
