## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Refurbished and Used Surgical and Operating Microscopes competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Refurbished and used surgical and operating microscopes production reached 12.0 k units, with an average global market price of around US\$ 52,000 per unit. Refurbished and used surgical and operating microscopes refer to high-precision surgical microscopes that have previously been owned or used, and which are then comprehensively inspected, repaired or have critical components replaced, and restored to clinical-use standards by either the original manufacturer or a specialist refurbishment provider. Their purpose is to offer medical institutions with constrained budgets or seeking cost-effective solutions equipment that comes with maintenance and after-sales support, thereby reducing acquisition cost while ensuring surgical visibility clarity and equipment reliability. This report is designed to support manufacturers, refurbishment service providers and healthcare institutions in systematically evaluating the procurement value, service model and operational strategy of refurbished and used surgical and operating microscopes. In recent years, as medical institutions face constrained procurement budgets, extended equipment upgrade cycles and growing demand for maintenance services, the industry of refurbished and used surgical microscopes has begun to develop rapidly. While this market starts from a lower base than the new-equipment segment, it is becoming an important procurement complement for hospitals and clinics due to its cost advantage and high equipment reuse rate. In terms of growth rate, with hospitals placing increasing emphasis on cost-performance and second-tier market demand emerging, this industry is expected to sustain a moderate-to-high annual growth pace. In terms of regional

structure, North America remains the region with the highest acceptance of refurbished and used surgical microscopes and the most fully developed service and support ecosystem; Europe follows; while the Asia-Pacific region is particularly prominent, especially in India and Southeast Asian countries where budgets are limited and equipment renewal lags, making refurbished and used surgical microscopes a key option for equipment expansion and renewal. In terms of product structure, the industry can be divided into three price tiers: the low-price band for ophthalmology/dentistry, the mid-price band for ENT/general use, and the high-price band for neurosurgery/spine; the largest volume belongs to ophthalmology and general-use models, while the highest unit price is found in neurosurgery/spine models. The application structure covers cataract and retinal surgery in ophthalmology, minimally-invasive ENT surgery, dental implant/root-canal procedures, plastic/general surgery, and neurosurgery/spine operations. Within these scenarios, budget-constrained or second-tier hospitals are especially inclined to adopt refurbished equipment. Regarding cost structure, the main costs of refurbished equipment include old-unit recovery or trade-in, replacement of key optical and illumination modules, repair labour and warranty services; compared to new-equipment, a large proportion of R&D and initial manufacturing investment is avoided. As for single-line production/refurbishment capacity, although unified public data is lacking, it is estimated that a factory equipped with a full refurbishment, calibration, inspection and warranty workflow can handle hundreds to a thousand units annually. In terms of gross margin, factoring in unit-source cost, repair logistics and warranty risk, the industry average gross margin can be estimated at roughly 30%-40%. In terms of the industry chain structure, the upstream includes original-equipment-manufacturers of surgical microscopes and their certified refurbishment programmes; the midstream consists of specialist refurbishment providers, repair/service firms and distribution channels; the downstream comprises hospitals, surgical centres and outpatient clinics. The competitive landscape exhibits a 'dual-track' pattern: on one hand, OEM-certified channels take advantage of brand trust, service guarantees and trade-in mechanisms; on the other hand, independent refurbishment firms capture market share through flexible sourcing, diverse service options and more attractive pricing. In terms of development trends, refurbished and used surgical microscopes are shifting from the traditional 'low-price substitute' model to a 'service-and-lifecycle-management' model, with future growth driven by leasing and usage-based payment, integration of refurbished equipment with digital imaging/fluorescence modules, and circular-economy device-reuse frameworks.

The global Refurbished and Used Surgical and Operating Microscopes market size was estimated at USD 624.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.30% during the forecast period.
