Abstracts

Regeneration injections, also known as regenerative medicine injections, are a class of therapeutic treatments that utilize biological materials?such as platelet-rich plasma (PRP), stem cells, exosomes, or growth factors?to stimulate the body?s natural healing processes, repair damaged tissues, reduce inflammation, and restore function in musculoskeletal, dermatological, and aesthetic applications. These minimally invasive procedures are increasingly used in orthopedics, sports medicine, pain management, and anti-aging medicine as alternatives or adjuncts to surgery or pharmaceutical interventions, leveraging the body?s innate regenerative capabilities to address conditions like osteoarthritis, tendon injuries, and skin rejuvenation.
