## Abstracts

A regenerative DC load is a type of electronic load that not only draws power from a DC source to test devices like batteries, power supplies, and solar panels, but also feeds the absorbed energy back into the power grid or another usable source. Unlike traditional resistive loads that dissipate energy as heat, regenerative loads recycle energy, making them more efficient and environmentally friendly. They offer precise control over current, voltage, and power, making them ideal for applications in R&D, production testing, and energy storage systems where energy efficiency and cost savings are priorities.

The global Regenerative DC Load market size was estimated at USD 125.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
