Report Overview

A regulator rectifier is a unit that rectifies and regulates the inputs given by a battery to the attenuator. It regulates the overcharging of a battery. A Regulator rectifier is an auto electric part used as a component in the two-wheelers, three-wheelers, and ATVs (All-Terrain Vehicles). Regulator rectifier can either be single phase or three phase type. A two-wheeler gets power from two sources; battery and the alternator. The alternator charges the vehicle when it's on the go through electromagnetic induction. However, this electricity is AC (alternating current) that is converted into direct current with the help of the regulator rectifier. Also, the regulator rectifier controls the flow of current sent to all the electrical parts of a vehicle.
