Abstracts

Reinforcing bar couplers, also known as rebar couplers or mechanical splices, are specialized structural connectors used in reinforced concrete construction to join two reinforcing steel bars end-to-end, creating a continuous load transfer path without relying on traditional lap splicing methods; these devices typically consist of threaded sleeves, swaged couplings, or grout-filled sleeves that mechanically or chemically bond to the rebar, ensuring alignment, tension and compression strength equivalent to or exceeding that of the bar itself, while offering advantages such as reduced material usage, faster installation, improved structural integrity, and enhanced seismic performance in applications like high-rise buildings, bridges, infrastructure projects, and precast concrete elements.

The global Reinforcing Bar Couplers market size was estimated at USD 425.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
