Report Overview

A relay valve is an air-operated valve typically used in air brake systems to remotely control the brakes at the rear of a heavy truck or semi-trailer in a tractor-trailer combination. Relay valves are necessary in heavy trucks in order to speed-up rear-brake application and release, since air takes longer to travel to the rear of the vehicle than the front of the vehicle, where the front service brakes, foot-valve, parking-control valve, and trailer-supply valve (if applicable) are located.

The global Relay Valve market size was estimated at USD 889 million in 2023 and is projected to reach USD 1287.39 million by 2032, exhibiting a CAGR of 4.20% during the forecast period.
