Report Overview

Release liner papers and films are specialized materials used in various industries for their ability to provide a protective backing that can be easily removed. Release liner papers are typically made from materials such as glassine or supercalendered kraft paper, while release liner films are often made from materials like polyester or polyethylene terephthalate (PET). These materials are coated with silicone on one or both sides to create a non-stick surface, allowing for easy release of adhesives or other sticky substances. Release liner papers and films are commonly used in applications such as labels, tapes, medical products, and graphic arts.
