### Report Overview

Remote cardiac monitoring devices enable a continuous monitoring of electrical activities of heart away from hospitals. They also allow the at-home electrocardiographic (ECG) monitoring of patients with suspected cardiac arrhythmias or at risk for developing arrhythmias. The monitoring can also be performed when patients are engulfed in their day-to-day activities. Thus, one of the most important benefits of remote cardiac device monitoring is it decreases the need for routine doctor visits. Devices such as pacemakers and implantable cardioverter-defibrillator are implanted in the heart of the patients through minimally invasive procedures. A transmitter that works in sync with the device undertakes the transmission of data.
