## Abstracts

Synthetic Fuels are an emerging class of carbon-neutral drop-in replacement fuels that are made by storing energy from renewable sources in the chemical bonds of liquid or gas fuels. Synthetic fuels are chains of elements hydrogen and carbon also known as hydrocarbon molecules. It is also known as synfuel. They are made by capturing carbon emissions during the process of manufacture. Synthetic fuel is believed to be an alternative to fossil fuels in the future energy economy. Since the fuel production process will be capturing carbon dioxide during the process and be fed for further production of fuels, many industry players are investing in enhancing the existing synthetic fuel and boosting research and development activities.

The global Synthetic Fuel market size was estimated at USD 6220.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 18.80% during the forecast period.
