Report Overview:

In molecular biology, a reporter gene (often simply reporter) is a gene that researchers attach to a regulatory sequence of another gene of interest in bacteria, cell culture, animals or plants. Certain genes are chosen as reporters because the characteristics they confer on organisms expressing them are easily identified and measured, or because they are selectable markers. Reporter genes are often used as an indication of whether a certain gene has been taken up by or expressed in the cell or organism population.

The Global Reporter Gene Assay Market Size was estimated at USD 1503.29 million in 2023 and is projected to reach USD 2096.49 million by 2029, exhibiting a CAGR of 5.70% during the forecast period.
