## Abstracts

A resettable polymeric fuse, also known as a polymeric positive temperature coefficient (PPTC) device or a resettable fuse, is a type of electronic component designed to protect electronic circuits from overcurrent conditions. Unlike traditional fuses, which are one-time-use devices that must be replaced after they trip, resettable polymeric fuses can be automatically reset and reused when the overcurrent condition is removed. There is a continuous trend toward miniaturization in the electronics industry. Resettable polymeric fuses may see developments in smaller form factors, making them suitable for compact and densely populated circuit designs.

The global Resettable Polymeric Fuse market size was estimated at USD 424.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
