Report Overview

Residential air exchanger is a type of ventilation system designed to improve indoor air quality in homes. It works by exchanging stale, indoor air with fresh, outdoor air while also recovering the heat energy from the outgoing air to preheat the incoming air during the winter months. Residential air exchangers are especially beneficial in homes that are tightly sealed or have poor ventilation, as they can help to remove harmful pollutants such as radon, carbon dioxide, and volatile organic compounds (VOCs) from the air. They can also help to reduce excess humidity in the home, which can lead to mold growth and other moisture-related problems.
