Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Residual Heat Removal (RHR) Pumps competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Residual Heat Removal (RHR) Pumps production reached approximately 52 units, with an average global market price of around US\$ 2,212,000 per unit. In 2024, the global 's total production capacity of Residual Heat Removal (RHR) Pumps reached 70 units. The industry average gross profit margin of this product reached 37%. Residual Heat Removal (RHR) Pumps are the main power equipment of the residual heat removal system. They are used to take over some of the functions of the main pumps after the reactor is shut down, continue to drive the coolant circulation, and transfer the residual heat generated in the core to the final heat sink (usually seawater or atmosphere). Upstream raw materials include stainless steel, titanium alloys, and high-temperature alloys. Core components mainly include motors, seals, castings, and various forgings. Material quality directly determines the pump's lifespan and reliability. The core of the upstream industry lies in ensuring a reliable supply of cutting-edge materials and key components. Technologies for some top-performance special materials and high-end seals are still controlled by a few companies in developed countries. The midstream is the main battleground for technological competition, with the global market exhibiting a pattern of "international giants dominating, and leading companies from various countries vying for dominance." International manufacturers such as Flowserve (USA), KSB (Germany), Framatome (France), and Westinghouse (USA) hold important positions in the high-end market, especially in Europe and the US, thanks to their long-term technological accumulation and global layout. Chinese manufacturers, represented by state-owned enterprises such as Shenyang Blower Works Group, Harbin Electric Corporation, and Dongfang

Electric Corporation, are making rapid progress. Downstream demand is directly driven by the nuclear power policies of various countries. Active nuclear power construction in emerging markets such as China and India is the main driver of growth. Technological upgrades and equipment replacements of existing units in Europe and North America are also important markets.

The global Residual Heat Removal (RHR) Pumps market size was estimated at USD 115.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
