## Abstracts

High-density polyethylene (HDPE) is a common resin material for automobile plastic fuel tanks. It has become the mainstream material for fuel tank production due to its excellent chemical corrosion resistance, good impact resistance and low manufacturing cost. HDPE has strong plasticity and can be made into composite fuel tanks through multi-layer co-extrusion technology to improve its performance in blocking fuel evaporation. In addition, in the case of more stringent requirements for fuel evaporation emissions, barrier layer materials such as ethylene-vinyl alcohol copolymer (EVOH) and adhesives (LLDPE) can be added to the resin to further improve the environmental performance and safety of the fuel tank.

The global Resin for Automobile Plastic Fuel Tank market size was estimated at USD 5870.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
