Abstracts

The main components of composite materials are fibers and resins. Fibers are usually glass fibers or carbon fibers, which can enhance the strength and stiffness required by the product. However, if used alone, they still cannot meet the final performance of the product. If the fibers are impregnated with resin and then cured, the strength, stiffness and lightness requirements of various application designs can be achieved, while adding many benefits to the final product.

The global Resin for Composite Material market size was estimated at USD 1056.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.60% during the forecast period.
