### Report Overview

Resin Color Developer are mainly divided into two types: salicylic acid resin colorants and phenolic resin colorants. Salicylic acid based resin colorants refer to resin colorants made from salicylic acid as raw material, with the addition of catalysts, and processed through heating, melting, stirring, and other processes. They have the advantages of light resistance, high color density, and high coating whiteness; Phenolic resin colorants have advantages such as good water resistance and color rendering effect, but their aging resistance is poor, and long-term storage can cause yellowing. In the future, with technological progress, salicylic acid based resin colorants will occupy a larger market share in resin colorants
