Abstracts

Resin Copper Clad Laminate (RCCL) refers to a type of substrate material used in the manufacturing of printed circuit boards (PCBs), consisting of a reinforcement material—typically glass fiber or other woven or non-woven fabrics—impregnated with a thermosetting resin, such as epoxy, phenolic, or polyimide, and clad on one or both sides with a thin layer of copper foil. This composite material serves as the foundational insulating layer that provides mechanical support and electrical insulation while the copper cladding forms the conductive pathways for electronic circuits. RCCL is engineered to exhibit specific properties tailored to application requirements, including thermal stability, dielectric constant, dissipation factor, flame retardancy, and dimensional stability, making it a critical component in electronics ranging from consumer devices to high-frequency and high-speed communication equipment.

The global Resin Copper Clad Laminate market size was estimated at USD 18500.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
