Report Overview:

Resistance welding is a welding technology widely used in manufacturing industry for joining metal sheets and components. The weld is made by conducting a strong current through the metal combination to heat up and finally melt the metals at localized point(s) predetermined by the design of the electrodes and/or the work pieces to be welded. A force is always applied before, during and after the application of current to confine the contact area at the weld interfaces and, in some applications, to forge the work pieces.

The Global Resistance Welding Equipment Market Size was estimated at USD 1046.13 million in 2023 and is projected to reach USD 1256.43 million by 2029, exhibiting a CAGR of 3.10% during the forecast period.
