Abstracts

Respiratory system stents are medical devices designed to maintain the patency and structural integrity of airways, including the trachea, bronchi, and bronchioles, in patients suffering from obstructions, strictures, or collapse due to conditions such as tumors, inflammation, trauma, or post-surgical complications. Typically made from materials like silicone, metal alloys (e.g., nitinol), or hybrid composites, these implants are deployed via bronchoscopy to provide mechanical support, alleviate symptoms like dyspnea, and improve quality of life, often serving as either a temporary measure or long-term solution depending on the clinical context and stent design.
