Report Overview

Retail Distributed Order Management (DOM) systems use rule-based procedures to determine how best to fulfill customer orders — a key consideration for balancing both fulfillment lead times and retailer's costs. The purpose of a DOM application is to allow retailers and CP companies to maximize order fulfillment while balancing two constraints: the customer expects their order to be fulfilled on time and in full and the company wishes to meet these customer expectations but at the lowest possible cost of order fulfillment. The DOM therefore, looks to orchestrate and optimize the process of customer order fulfillment through managing these constraints and without having to trade off one over the other.
