Abstracts

Retail EDI Software is an automated business communication system based on international standards. Its core function is to enable the structured, standardized electronic exchange of business documents between retailers and their trading partners, such as suppliers and logistics providers. By replacing traditional paper emails and faxes, the system automatically processes key business information such as purchase orders, shipping notices, invoices, inventory data, and sales forecasts, achieving a paperless process from order placement to shipment to settlement. This not only greatly improves the efficiency and speed of supply chain operations and reduces human error, but also helps retailers optimize inventory levels, reduce out-of-stock risks, and accelerate cash turnover by enhancing the timeliness and visibility of data. Therefore, this software is an indispensable digital infrastructure for efficient collaboration in the modern retail supply chain and one of the core technologies supporting rapid response to the consumer market and precise replenishment.

The global Retail EDI Software market size was estimated at USD 90.12 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
