Report Overview

Retanning agents may include main tanning agents (such as chrome tanning agents, vegetable tanning agents, etc.), mainly referring to tanning materials developed for the purpose of retanning, such as acrylic resin retanning agents, amino resin retanning agents, oxazolidine tanning agents, etc. agents, etc., ETC. The functions of the retanning agent mainly include: 1. Increase the effect of the main tanning agent; make the distribution and effect of the tanning agent uniform, increase the combination, and reduce the discharge. 2. Endow leather with specific properties; make crust leather have ideal subsequent processability, such as dyeability, grindability, formability, etc. In addition, the appearance and performance can also be obtained, such as elasticity, fullness, special grain state, etc. 3. Make up for the defects of crust leather; differences between leather materials, between batches and batches between sheets, and the position of the same raw material will cause inhomogeneity, improper pre-treatment process balance or process balance requirements, separate If the tanning agent or tanning method cannot meet the requirements, it can be made up and improved by retanning. 4. Increase the yield of leather; such as increasing the thickness of the leather or improving the firmness and fullness of the side abdomen, increasing the yield and utilization rate of the whole leather. Increased grade rate of production batches.
